Demo Customer Sales

02.02.2026 - 09.02.2026

Hello Demo Customer Sales

Return on Investment

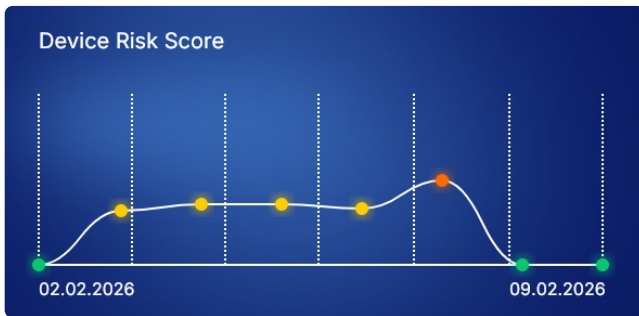

Total Saved: €1,647.12

Maintaining a low device risk score is crucial in working proactively against device breaches ex. Vulnerabilities, Complex attacks, DNS.

Maintaining a low user risk score is crucial in working proactively against user accounts breaches ex. Abnormal logins, Cloud Ransomware attacks.

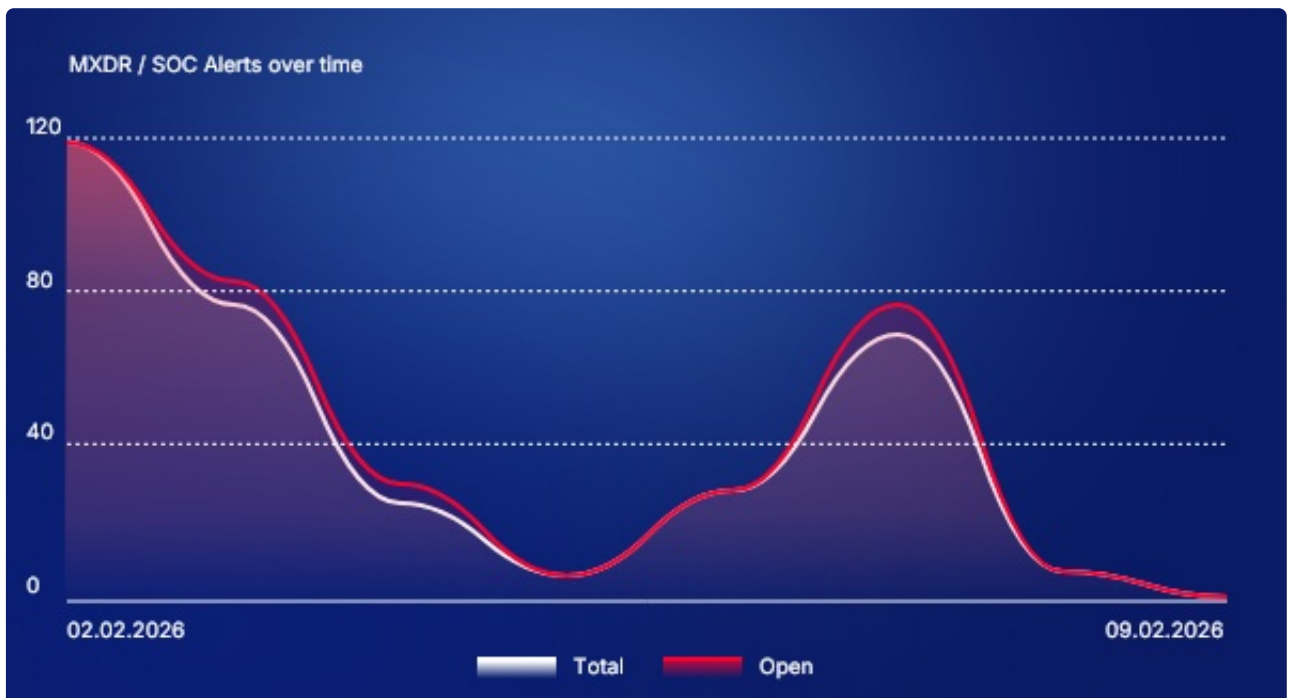

Device Risk Score:

M365 Risk Score:

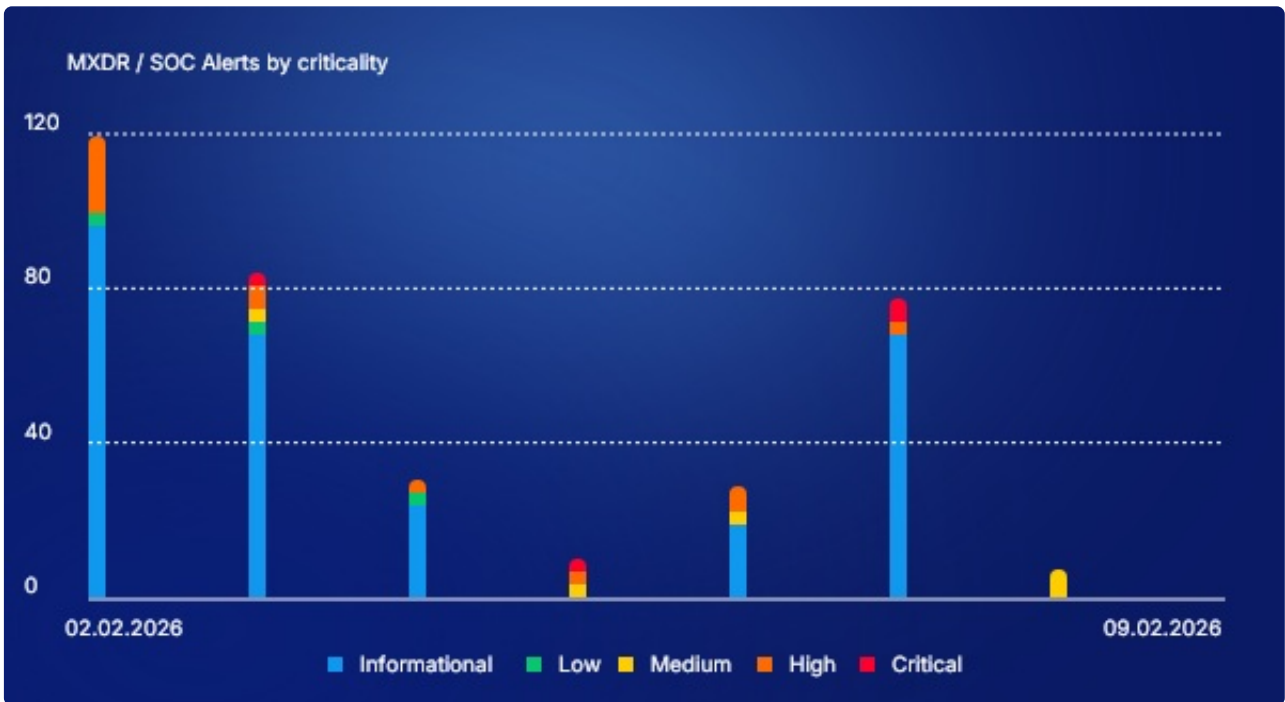

The total alert volume handled by the Heimdal MXDR / SOC team is as follows.

Total alerts: **331** Open: **350**

Alerts by Criticality by day, is a strong representation of the attack complexity against your environment and the ability to assess the complexity of the attacks carried out by your adversaries.

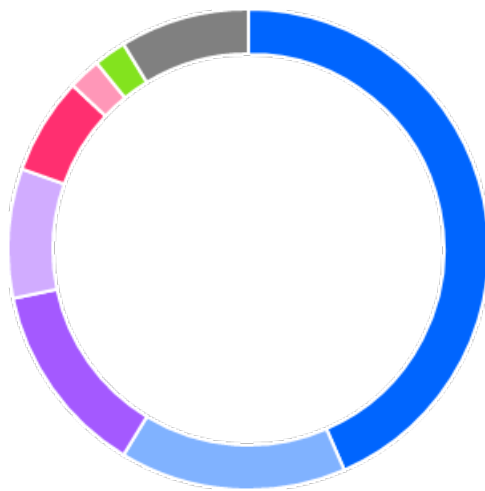

The attack complexity split is a strong indicator of the attackers ability to reach the inner areas of the environment. Critical and High alerts are an indicator that attackers are in near proximity of breaching.

This graph lists a breakdown of the most critical rule detections in Heimdal's TAC Portal and showing the attackers most preferred attack type. Its purely for informational purposes.

High and Critical by Rule

- 43.5% | NGAV: Infected File Denied
- 15.2% | NGAV: Infected File Allow
- 13% | REP: Process blocked
- 8.7% | Suspicious Add Task From User AppData Temp
- 6.5% | Brute Force Attack
- 2.2% | File Created with System Process Name - 5D77EC26
- 2.2% | Malicious SSP loaded into the LSA process
- 8.7% | Other

Most actioned Hostname: N/A / Count: 0

Need Assistance?

If you require any help, please don't hesitate to reach out to us at the appropriate contact:
